INTERESTED IN MY WORK?

—

SEE MY PORTFOLIO HERE

I am a Bachelor of Software Engineering (Honours) graduate with hands-on experience delivering production software as a full-stack developer intern at TradeMe and Starboard Maritime Intelligence, working in fast-moving agile teams on real, high-impact systems. I combine strong fundamentals with practical judgment, moving comfortably across frontend, backend, cloud infrastructure, and data-driven systems while maintaining clean, maintainable code and clear communication. Beyond commercial work, I have led and contributed to long-running collaborative game development and freelance projects, reinforcing my adaptability, ownership, and ability to integrate diverse perspectives into coherent technical solutions. I recently relocated to Melbourne from Wellington, New Zealand and am focused on roles tackling complex problems (particularly in full-stack roles) within ambitious, collaborative engineering teams.

EXPERIENCE SUMMARY

Lead Programmer, Independent Video Game Dev. Team	2016 → Present
NZ Cadet Forces Leadership Training Course Staff	2020 → 2021
Freelance Web Developer	2021 → Present
Class Rep. For Innovate 100g and SOFTENG 284	2022 → 2024
UoA Engineering Part 1 Assistance Centre Tutor	2023 → 2024
Full Stack Developer Intern at TradeMe	2024 → 2025
Team Leader Part 4 Capstone Project, Part 3 Web-Dev Project	2024 → 2025
Lead Creative Technologist Centre for Innovation & Entrepreneurship	2025 → 2026
Full Stack Developer Intern at Starboard Maritime Intelligence	2025 → Present

EDUCATION

Bachelor of Software Engineering (Hons.) | University of Auckland | Feb 2022 → Nov 2025

- ***7.0 Overall GPA*** *(A-)*
- *SOFTENG 281 (OOP) top of class*
- *Class Rep. for INNOVATE 100G, Innovation Through Design*
- *Class Rep. for SOGTENG 284, Data Structures & Algorithms*
- *Lead actor in Engineering Revue 2024*
- *Part 1 Assistance Centre Tutor*
- *CIE Lead Creative Technologist*
- *Rainbow Engineering Executive 2025*

TECHNICAL EXPERIENCE

Java, C, C++, Go, Python | React, Angular, TypeScript, CSS, HTML, MySQL, GCP, Kubernetes, Docker
MATLAB, R, Halide, LaTeX, Systems Documentation | C#, Unity, Niantic VPS, HLSL, OpenGL, UI / UX
3D Printing, CNC Operation, CAD, Industrial Design, Embedded Systems, Wireless Communication

DETAILED EXPERIENCE

Full Stack Developer Intern at Trade Me: As a full stack developer in Trade Me's Property business unit, I worked across the development lifecycle, contributing to an eight-person agile team, "Game of Homes." I developed and optimized features using TypeScript, Angular, SCSS, HTML, C#, RXJS, SQL, and Terraform, ensuring scalability and maintainability. My role involved implementing new functionalities, improving performance, and actively participating in daily standups to align with team goals. Beyond coding, I contributed to software quality through unit and integration testing and pitched ideas for platform improvements. I also presented technical updates during property engineering all-hands meetings, strengthening my communication skills. This role deepened my experience in building high-performing web applications, working with cloud infrastructure, and following best practices for maintainable software while fostering collaboration within cross-functional teams.

Creative Technologist at the Centre for Innovation and Entrepreneurship: Throughout 2025 I was employed as a Creative Technologist at the University of Auckland's Centre for Innovation and Entrepreneurship (CIE), a role that proved to be both a professional milestone and a period of significant personal growth. Working at the intersection of engineering, design, business, and education, I oversaw the Maker Space and delivered hands-on training across digital fabrication, electronics, AI, and VR, while keeping a diverse and heavily used technical environment running smoothly.

Despite being one of the newest members of the team, I was promoted to Lead CT in July 2025, reflecting both trust and responsibility. Beyond the technical remit, the role required shaping team direction, building bridges between technical staff and operations, and translating complex ideas for audiences with very different backgrounds. The pace, autonomy, and breadth of the position allowed me to flourish, sharpening my ability to learn new technologies quickly, communicate across disciplines, and lead with genuine enthusiasm for making, experimentation, and shared knowledge.
